

inorganic materials which are first shaped and then permanently hardened by heat. Though glass is first melted and then shaped, after the same becomes a bit cooler, yet it is treated as a ceramic product as an exception, because glassy phase is a common occurrence in many fired bodies under ceramics.

Pottery is mainly concerned with clay craft using clay and can be broadly classified as follows:

A. Pottery:

1. Structural pottery
2. Tablewares
3. Refractories
4. Industrial and chemical pottery

B. Glass

C. Enamel
